

Who keeps the water safe and clean in my home?

A plumber fixes the pipes that bring clean water into your home and push dirty water out.

Water gets to your bathroom and kitchen through pipes inside the walls. The water moves through the pipes using pressure.

Pipes for hot and cold water are inside the walls of your home. These pipes bring in clean water and push dirty water outside.

A water heater warms the water in your home. This warm water is used for bathing, washing clothes and cleaning the dishes.
